Enhancement

An enhancement is listed in the table.

Enhancements in Firmware Revision 11.002

Enhancement	Description
Support for the 1756-DNB series D module	This release adds support for the series D module. Firmware 11.x can also be used with the series C module.

Corrected Anomalies

Corrected anomalies are listed in the tables.

Corrected Anomalies in Firmware Revision 11.003

Corrected Anomaly	Description
Messages referencing attribute ID 0 were not sent properly on the DeviceNet network.	If an explicit message was sent through the 1756-DNB module and that message referenced attribute ID 0, the attribute ID was stripped from the message before the message was sent on the DeviceNet network. Lgx00090090

Corrected Anomalies in Firmware Revision 11.002

Corrected Anomaly	Description
Potential lockout of a slave device on a network	If a series C firmware revision 10.x module is on a network with another master, the series C firmware revision 10.x module could lock out a slave device that is in the scanlist of the other master. Lgx00084208, Lgx00084998
